CT ABDOMEN PELVIS W IV CONTRAST - Final result (09/23/2025 9:17 PM EDT)

Anatomical Region		Laterality	Modality	
Body, Pelvis, Abdomen			Computed Tomography	
Specimen (Source)	Anatomical Location / Laterality	Collection Method / Volume	Collection Time	Received Time
			09/23/2025 9:15 PM EDT	

Impressions

09/23/2025 9:44 PM EDT

1. No evidence of appendicitis. Normal appendix is visualized although faintly. No inflammatory changes in this region.

2. Small right adnexal cyst measuring 2 cm.

THIS DOCUMENT HAS BEEN ELECTRONICALLY SIGNED BY VRAD PROVIDER SUSHILA KOMPALA, MD ON 09/23/2025 09:44 PM

Narrative

09/23/2025 9:44 PM EDT

PROCEDURE INFORMATION:

Exam: CT Abdomen And Pelvis with Contrast

Exam date and time: 9/23/2025 9:15 PM

Age: 21 years old

Clinical indication: Abdominal pain; Localized; Right lower quadrant (r1q);

Additional info: Appy, po contrast

TECHNIQUE:

Imaging protocol: Computed tomography of the abdomen and pelvis with contrast.

Radiation optimization: All CT scans at this facility use at least one of these dose optimization techniques: automated exposure control; mA and/or kV adjustment per patient size (includes targeted exams where dose is matched to clinical indication); or iterative reconstruction.

Contrast material: OMNI 350; Contrast volume: 100 ml; Contrast route: INTRAVENOUS (IV);

Other contrast: Oral, gastrographin, 10ml - 900 water;

COMPARISON:

US PELVIS TRANSVAGINAL 9/23/2025 6:01 PM

FINDINGS:

Liver: Normal. No mass.

Gallbladder and biliary ducts: The gallbladder is partially contracted.

Pancreas: Normal. No ductal dilation.

Spleen: Normal. No splenomegaly.

Adrenal glands: Normal. No mass.

Kidneys and ureters: No hydronephrosis or renal mass.

Stomach and bowel: Most of the small bowel is opacified with oral contrast and is within normal limits. The terminal ileum is fluid filled. Moderate amount of stool seen throughout the colon.

Appendix: No evidence of appendicitis. A short appendix is somewhat suboptimally visualized. No inflammatory changes are seen in this region and the fat appears normal.

Intraperitoneal space: Unremarkable. No free air. No significant fluid collection.

Vasculature: Unremarkable. No abdominal aortic aneurysm.

Lymph nodes: Unremarkable. No enlarged lymph nodes.

Urinary bladder: Unremarkable as visualized.

Reproductive: The uterus is retroverted. There is a 2 cm right adnexal collapsed appearing cyst.

Bones/joints: Unremarkable.

Soft tissues: Unremarkable.

Procedure Note

US PELVIS TRANSVAGINAL - Final result (09/23/2025 6:19 PM EDT)

Anatomical Region	Laterality	Modality
Pelvis		Ultrasound

Specimen (Source)	Anatomical Location / Laterality	Collection Method / Volume	Collection Time	Received Time
			09/23/2025 6:01 PM EDT	

Impressions

Normal pelvic ultrasound. No evidence of torsion.

THIS DOCUMENT HAS BEEN ELECTRONICALLY SIGNED BY VRAD PROVIDER SUSHILA KOMPALA, MD ON 09/23/2025 08:15 PM

Narrative

09/23/2025 8:15 PM EDT

PROCEDURE INFORMATION:

Exam: US Pelvis, Transvaginal, Non-Obstetric

Exam date and time: 9/23/2025 6:01 PM

Age: 21 years old

Clinical indication: Pelvic pain; Additional info: Rlq pain, acute onset

TECHNIQUE:

Imaging protocol: Real-time transvaginal pelvic (non-obstetric) ultrasound with image documentation. Transvaginal imaging was used for better evaluation of the endometrium, adnexa, and/or cervix.

COMPARISON:

No relevant prior studies available.

FINDINGS:

Uterus: The uterus measures 6 x 3 x 5 cm. Endometrium is unremarkable with a thickness of 7 mm.

Right ovary/adnexa: The right ovary measures 3.2 x 1.9 x 2.2 cm with normal flow on Doppler. Prominent follicles seen the largest measuring about 6 mm.

Left ovary/adnexa: The left ovary measures 2.9 x 1.4 x 1.9 cm with normal flow on Doppler. Largest follicle measures 8 mm.

Urinary bladder: Urinary bladder is limited.

Intraperitoneal space: No free fluid.

Narrative

CMC HOSPITAL LAB - 09/23/2025 4:58 PM EDT
eGFR is estimated using the 2021 CKD-EPI equation. An eGFR less than 60 mL/min/1.73m2 suggests kidney disease in those younger than 65 years. Values below this threshold in those 65 years or older may not suggest CKD. Methods that use cystatin C are recommended to confirm estimated GFR in adults who are at risk for or have chronic kidney disease.

PROCEDURE INFORMATION:
Exam: CT Head Without Contrast
Exam date and time: 5/12/2024 11:12 PM
Age: 19 years old
Clinical indication: Other: Headache

TECHNIQUE:
Imaging protocol: Computed tomography of the head without contrast.
Radiation optimization: All CT scans at this facility use at least one of these dose optimization techniques: automated exposure control; mA and/or kV adjustment per patient size (includes targeted exams where dose is matched to clinical indication); or iterative reconstruction.

COMPARISON:
No relevant prior studies available.

FINDINGS:
Brain: Normal. No hemorrhage. Unremarkable white matter. No mass effect.
Cerebral ventricles: No ventriculomegaly.
Paranasal sinuses: Visualized sinuses are unremarkable. No fluid levels.
Mastoid air cells: Visualized mastoid air cells are well aerated.
Bones: Unremarkable. No acute fracture.
Soft tissues: Unremarkable.

IMPRESSION:
No acute intracranial abnormality.

If you take your Lucy record on a thumb drive to a different doctor, he or she might be able to use his computer to read the file electronically. Your downloaded, machine-readable Personal Health Summary document is in a format called "CDA." If your doctor has a computer that understands CDA, your information is a folder on your thumb drive called **MachineReadable_XDMFormat**. You might need to enter a password before your doctor can use this file.

Discharge Instructions - documented in this encounter

Discharge Instructions

Caelyn Bellerose, MD - 09/23/2025 10:17 PM EDT

Formatting of this note might be different from the original.

Your CT scan did not show any evidence of appendicitis, you have a small cyst on the right ovary. This is likely normal. Please return for severe pain, sometimes you can have something called ovarian torsion, with the ovary twist on itself however this is unlikely to happen. If you have severe pain, you will need an ultrasound which return to the ER.

Electronically signed by Caelyn Bellerose, MD at 09/23/2025 10:17 PM EDT

Medications at Time of Discharge - documented as of this encounter

Medication	Sig	Dispense Quantity	Last Filled	Start Date	End Date
cephalexin (Keflex) 500 mg capsule	Take 1 capsule by mouth in the morning and 1 capsule before bedtime. Do all this for 5 days.	10 capsule		09/26/2025	10/01/2025

Ordered Prescriptions - documented in this encounter

Prescription	Sig	Dispense Quantity	Last Filled	Start Date	End Date
cephalexin (Keflex) 500 mg capsule	Take 1 capsule by mouth in the morning and 1 capsule before bedtime. Do all this for 5 days.	10 capsule		09/26/2025	10/01/2025

HPI

Chief Complaint

Patient presents with

Abdominal Pain

Patient is a 21 y.o. female otherwise healthy, presenting with significant other to the ED with c/o abdominal pain. Pt reports consistent pain in her RLQ since this morning that she rates as a 7/10. Pt states that she had ibuprofen at 14:00, which reduced the pain to mild but still consistent. Pt reports that it hurts in the same region while ambulating. Pt endorses nausea. Pt denies f/v and burning during urination.

ED Course & MDM

20-year-old female present with right lower quadrant tenderness. Also with some nausea, pain worse with walking. Physical exam and some mild right lower quadrant tenderness. CRP is 8.9, last white count was normal. Does have some bacteria but is asymptomatic. hCG negative. Ultrasound does not show any evidence of acute normalities, CT scan was done that shows a right

sided small cyst, this could be the cause of her symptoms. No evidence of appendicitis per patient was discharged home

PROCEDURE INFORMATION:

Exam: CT Abdomen And Pelvis with Contrast

Exam date and time: 9/23/2025 9:15 PM

Age: 21 years old

Clinical indication: Abdominal pain; Localized; Right lower quadrant (r1q);

Additional info: Appy, po contrast

TECHNIQUE:

Imaging protocol: Computed tomography of the abdomen and pelvis with contrast.

Radiation optimization: All CT scans at this facility use at least one of these dose optimization techniques: automated exposure control; mA and/or kV adjustment per patient size (includes targeted exams where dose is matched to clinical indication); or iterative reconstruction.

Contrast material: OMNI 350; Contrast volume: 100 ml; Contrast route: INTRAVENOUS (IV);

Other contrast: Oral, gastrographin, 10ml - 900 water;

COMPARISON:

US PELVIS TRANSVAGINAL 9/23/2025 6:01 PM

FINDINGS:

Liver: Normal. No mass.

Gallbladder and biliary ducts: The gallbladder is partially contracted.

Pancreas: Normal. No ductal dilation.

Spleen: Normal. No splenomegaly.

Adrenal glands: Normal. No mass.

Kidneys and ureters: No hydronephrosis or renal mass.

Stomach and bowel: Most of the small bowel is opacified with oral contrast and is within normal limits. The terminal ileum is fluid filled. Moderate amount of stool seen throughout the colon.

Appendix: No evidence of appendicitis. A short appendix is somewhat suboptimally visualized. No inflammatory changes are seen in this region and the fat appears normal.

Intraperitoneal space: Unremarkable. No free air. No significant fluid collection.

Vasculature: Unremarkable. No abdominal aortic aneurysm.

Lymph nodes: Unremarkable. No enlarged lymph nodes.

Urinary bladder: Unremarkable as visualized.

Reproductive: The uterus is retroverted. There is a 2 cm right adnexal collapsed appearing cyst.

Bones/joints: Unremarkable.

Soft tissues: Unremarkable.

Impressions

Normal pelvic ultrasound. No evidence of torsion.

THIS DOCUMENT HAS BEEN ELECTRONICALLY SIGNED BY VRAD PROVIDER SUSHILA KOMPALA, MD ON 09/23/2025 08:15 PM

Narrative

09/23/2025 8:15 PM EDT

PROCEDURE INFORMATION:

Exam: US Pelvis, Transvaginal, Non-Obstetric

Exam date and time: 9/23/2025 6:01 PM

Age: 21 years old

Clinical indication: Pelvic pain; Additional info: Rlq pain, acute onset

TECHNIQUE:

Imaging protocol: Real-time transvaginal pelvic (non-obstetric) ultrasound with image documentation. Transvaginal imaging was used for better evaluation of the endometrium, adnexa, and/or cervix.

COMPARISON:

No relevant prior studies available.

FINDINGS:

Uterus: The uterus measures 6 x 3 x 5 cm. Endometrium is unremarkable with a thickness of 7 mm.

Right ovary/adnexa: The right ovary measures 3.2 x 1.9 x 2.2 cm with normal flow on Doppler. Prominent follicles seen the largest measuring about 6 mm.

Left ovary/adnexa: The left ovary measures 2.9 x 1.4 x 1.9 cm with normal flow on Doppler. Largest follicle measures 8 mm.

Urinary bladder: Urinary bladder is limited.

Intraperitoneal space: No free fluid.

Narrative

CMC HOSPITAL LAB - 09/23/2025 4:58 PM EDT
eGFR is estimated using the 2021 CKD-EPI equation. An eGFR less than 60 mL/min/1.73m2 suggests kidney disease in those younger than 65 years. Values below this threshold in those 65 years or older may not suggest CKD. Methods that use cystatin C are recommended to confirm estimated GFR in adults who are at risk for or have chronic kidney disease.
